

Important information regarding homework changes for maths in Year 1 and 2

In school we are using the program Mathletics and a password has been given to all children to use this at home too. Mathletics covers the different areas of learning, such as numbers, counting, number facts and place value.

The idea of using the computer program is to raise children's confidence in mathematics.

Your child's teacher will select specific homework activities relating to current learning which will be changed on a two-weekly basis.

To access this software at home you need to go to

<https://community.mathletics.com/signin/#/student>

and then use your child's login details.

Teachers will monitor the children that complete this homework and reward regular use with dojos.

Children receive certificates on the program and when they do so, these will be given out in assemblies.

Just let your child's teacher know that they have received one and we will print these out to be presented.

Many thanks for your continued support.
